

YOUR SAFETY IS OUR PRIORITY

SABERTOOTH SAFETY FOOTWEAR

Unique Features Of SABERTOOTH Safety Footwear For Complete Foot Protection

MADE OF GENUINE LEATHER

SABERTOOTH Safety shoes are made up 100% genuine leather, ensuring highest level of ergonomics and comfort to the users.

SABERTOOTH SAFETY SHOE OUT-SOLE

SABERTOOTH offers a wide range of double density (PU/PU) footwear out soles which are moulded onto the shoe.

POLYURETHANE

The double density PU out sole in all models of SABERTOOTH safety shoes provide shock absorption and durability, yet light in weight and flexible.

UNIQUE DUAL DENSITY POLYURETHANE OUTSOLE OF SABERTOOTH SHOES

Inner layer being softer imparts shock absorbing properties hence provides increased comfort.

Outer layer is denser and harder hence provides maximum abrasion resistance thereby greatly increasing the life of the sole.

THE SABERTOOTH PROMISE...

SABERTOOTH SOLE PROPERTIES

ANTI-STATIC PROPERTIES

SLIP-RESISTANT TREAD PATTERN OF SABERTOOTH SHOES

The tread pattern of SABERTOOTH footwear has been technically designed to ensure a perfect grip and safety in all working environments.

The cleated tread pattern in the sole-design of SABERTOOTH Shoes offers the highest level of grip and slip-protection, providing compliance with slip-resistance norms at protection level of SRC (optional).

SABERTOOTH safety footwear equipped with ANTI STATIC PROPERTY

Charges build up in the body while we work through the day, as a result of various non conductive materials that rub against us and each other.

If we wish to avoid static charges, we must ensure that the charges should not be allowed to build up in the body, and should be continuously dissipated into the ground (commonly termed as "Earthing")

SABERTOOTH Anti - static shoe provides an easy access for this charge to flow from the body into the Earth.

The sole of these shoes are made in such a way that an easy channel is provided to dissipate these static charges to the ground.

SABERTOOTH Safety shoe is tested for anti-static property for its electrical resistance in between 100 kilo ohms and 1000 Mega ohms, as per EN 20345:2011.
